

DAN RAY FALCIS ROLLAN

Senior Technical Support Engineer | Developer Support Engineer | Product SME

Manila, Philippines | (+63) 976-211-7043 | danrayrollan98@gmail.com

Portfolio: danray.onrender.com

PROFESSIONAL SUMMARY

Senior-level Technical and Developer Support Engineer with 7+ years of combined professional experience across enterprise technical support, developer support, software engineering, endpoint management, and AR/VR development. Experienced in owning complex technical investigations across Windows, macOS, and Linux, with hands-on expertise in cross-platform patch management, Microsoft patching, Windows Update, WSUS, software deployment, PowerShell and Bash scripting, APIs, SDK integrations, log analysis, and root cause investigation.

Combines an engineering background with client-facing technical expertise to reproduce defects, develop solutions and workarounds, manage technical escalations, and translate complex findings into actionable guidance. Demonstrated leadership through technical mentoring, quality audits, KPI and SLA oversight, knowledge management, process development, Product SME responsibilities, and cross-functional collaboration with Engineering and client-facing teams.

TECHNICAL EXPERTISE

Technical Support: Advanced troubleshooting, root cause analysis, log analysis, bug reproduction, technical escalation, incident investigation, endpoint troubleshooting, software deployment

Endpoint & Patch Management: Windows, macOS and Linux patching, Microsoft patching, Windows Update, Windows Update Agent, WSUS, third-party application patching, patch applicability and detection, software inventory, update scheduling, reboot management

Windows & Systems: Windows 10/11, Windows Registry, Windows Services, Event Viewer, Windows Update logs, CBS logs, Group Policy concepts, Windows Installer, MSI troubleshooting, macOS, Ubuntu/Linux

Scripting & APIs: PowerShell, Bash, shell scripting, REST APIs, API troubleshooting, HTTP, JSON, GraphQL, SDK integration and debugging

Development: Ruby, Ruby on Rails, JavaScript, Vue.js, StimulusJS, C#, PHP, Laravel, SQL, PostgreSQL, MySQL, SQLite

XR & Tools: Unity, Meta XR SDKs, Unity XR, Meta Quest, Unreal Engine, Git, Jira, Grafana, Sumo Logic

PROFESSIONAL EXPERIENCE

SUPPORTNINJA | October 2021 – Present

Technical Support Engineer | October 2025 – Present

- Own complex technical investigations across Windows, macOS, and Linux involving patch detection and applicability, software deployment, endpoint connectivity, policy execution, agent behavior, and third-party application patching.
- Troubleshoot Microsoft patching and Windows Update issues involving Windows Update Agent, WSUS environments, registry and policy configuration, update detection, installation failures, and endpoint applicability.
- Analyze endpoint, agent, application, and platform logs to isolate failures, correlate behavior, validate suspected defects, and prepare technically complete Engineering escalations.
- Use PowerShell, Bash, APIs, and endpoint-level troubleshooting to validate system state, reproduce reported behavior, gather diagnostic evidence, and develop remediation approaches.
- Lead quality audits across the local support team, reviewing technical accuracy, process adherence, KPI performance, and client communication to identify coaching and continuous improvement opportunities.
- Provide technical mentoring and coaching through in-depth case reviews, troubleshooting guidance, escalation reviews, and response quality assessments.
- Oversee response quality and KPI adherence to help ensure technical standards, SLA expectations, quality targets, and customer satisfaction goals are consistently met.
- Developed a five-stage ticket lifecycle framework standardizing investigation, validation, communication, escalation, follow-up, and closure, helping move support from reactive troubleshooting toward proactive case management.
- Led development of internal knowledge base resources covering bug handling, investigation checklists, escalation criteria, ticket handoffs, internal processes, and structured technical responses.
- Adapted HEAT and Know, Feel, Do methodologies into a structured support communication framework combining client-focused communication with technical findings, impact, expectations, recommendations, and next steps.
- Collaborate across Engineering, Renewals, Account Management, and Technical Support on complex investigations, product issues, escalations, and client needs.
- Serve as a local Product Subject Matter Expert, providing technical guidance to support engineers and client-facing teams while leading technical client discussions around complex issues and product opportunities.

Developer Support Engineer, SME | January 2024 – October 2025

- Served as a technical escalation point for developer-facing issues involving XR technologies, SDK integrations, application behavior, development environments, and platform functionality.
- Investigated and reproduced complex developer issues through debugging, testing, log analysis, and technical validation to distinguish implementation issues from potential product defects.
- Integrated, debugged, and tested new XR functionality across SDK releases to validate behavior and identify developer-facing issues.
- Provided technical solutions and workarounds while preparing detailed Engineering escalations containing reproduction steps, environment information, observed and expected behavior, evidence, and troubleshooting findings.
- Led development of technical solutions and internal knowledge resources while mentoring engineers on troubleshooting, debugging, escalation quality, and developer communication.
- Collaborated with leadership and cross-functional teams to improve technical decision making, support quality, operational processes, and developer experience.

Developer Support Engineer | October 2021 – December 2023

- Supported developers with VR applications, SDKs, development environments, integrations, and platform functionality.
- Reproduced and investigated reported bugs through debugging, testing, log analysis, and technical evidence gathering, providing solutions and workarounds or escalating product issues when required.

- Collaborated with Support and Engineering teams throughout investigations while documenting technical findings and communicating actionable next steps to developers.

SOFTWARE ENGINEERING EXPERIENCE

Independent Software Development & Technical Projects | 2022 – Present

- Design and develop Ruby on Rails applications addressing support, ticket management, quality assurance, learning, and workflow challenges.
- Built a gamified learning management platform using Ruby on Rails to track progress, rewards, and career development, contributing to a first-place hackathon achievement.
- Prototyped an AI-powered call center companion designed to transcribe and analyze interaction data using customizable AI prompts and structured outputs.
- Contributed full-stack Ruby on Rails and Vue.js development to ChatGenie, delivering application features and production fixes.

ChatGenie | Web Developer, Project-based | February 2023 – June 2023

- Delivered new features, production fixes, and hotfixes while collaborating with developers on implementation, code reviews, and technical strategy.
- Worked with stakeholders to translate requirements into technical solutions and coordinate timely feature delivery.

Project Imahe Labs | VR Developer, Project-based | March 2021 – February 2022

- Led development of educational VR simulations using Unity, C#, and Meta Quest technologies while owning core application functionality.
- Coordinated with stakeholders, 3D artists, and interns and developed backend functionality using PHP and Laravel for user progress and achievement management.

Stock Knowledge | Junior Software Engineer | August 2020 – February 2021

- Led development of AR/VR simulations for STEM educational content and owned development of core VR features and functionality.
- Developed supporting web, backend, and augmented reality solutions while collaborating with stakeholders on product quality.

Didget Inc. | AR/VR Developer, Part-time | August 2020 – December 2020

- Developed VR and mobile application products and worked directly with company leadership to translate product requirements into technical solutions.

SELECTED ACHIEVEMENTS

SupportNinja: Top Performer of the Year, 2023, 2024 & 2025 | Multiple Monthly Top Performer Awards | 1st Place, The Idea Program - Internal Innovation Hackathon | Manager Cadetship Program Graduate

Universidad De Manila: Dean's Lister, 2018–2020 | Best Thesis, 2019–2020

EDUCATION

Bachelor of Science in Information Technology
Universidad De Manila, Manila | 2016 – 2020
