Dear Hiring Team,

I worked with Dan Ray Rollan over 4+ years during my time as a Program Manager and Developer Support Engineer at Meta, as we scaled technical support for VR Developers building for Meta Quest, Oculus Quest, and Oculus Start. Dan was someone I trusted to take a difficult developer problem and see it through. He was an official vendor partner with Meta as part of Support Ninja.

Our support work covered more than 20+ developer products across VR, AR, and mixed reality, including Presence Platform, hand tracking, Meta XR SDKs, and more. We were helping developers build with emerging technology on a platform that was still evolving. Supporting that breadth required strong technical judgment, adaptability, and the patience to work through problems whose answers weren't always straightforward. Dan was excellent at it.

He brought deep product knowledge and strong coding skills to debugging and troubleshooting. He took ownership, worked closely with developers and internal teams, and found practical solutions and workarounds that helped people get unblocked. I could count on him to stay engaged through the difficult parts of an issue and follow through.

As our developer community and ticket volume grew, Dan and his team stayed on top of the work while also reviewing applications to the Oculus Start program. They were prompt, professional, and willing to adapt as our needs changed. Dan consistently met our KPIs, including customer satisfaction (CSAT) and service-level agreement (SLA) targets, and our support scores were excellent. He kept attention on timely first responses and effective resolutions, helped oversee local team performance, monitored KPIs, and contributed to developing our performance dashboard.

Dan also put real effort into making the team stronger. He proactively helped colleagues build their technical skills and created a comprehensive knowledge base for developers and internal teams. With so many products and moving parts, having practical guidance, video recordings, and code examples to return to mattered. He made his expertise available to others and helped the team stay sharp as the work grew.

What I appreciated just as much was his kindness. Developers often reached out because something was blocking their progress, and Dan treated those situations with patience and empathy. He listened to feedback, adapted quickly, and remained helpful and professional. I trusted his technical judgment and the way he represented our team.

Dan had an enormous impact on our developer support operation. I consider him a world-class technical support engineer and recommend him wholeheartedly for senior Technical Support Engineer, Developer Support Engineer, and technical leadership roles. He has the technical depth to handle complexity and the judgment and care to lead others through it. I would strongly recommend hiring him in any team seeking a highly competent engineer who exudes an incredible degree of agency, resourcefulness, team leadership, and warmth.

Best Regards,

Michelle Vo
